

GREENPOINTER X2

Portable grinding machine
for Tungsten electrodes

- Integrated exhaustion with a replaceable dust filter
- Triple use of the diamond wheel
- Easy to use, combined electrode positioning and locking device
- Grinding electrodes as short as 8 mm

GREENPOINTER X2 - the only Tungsten grinder with an integrated dust filter

With the development of GREENPOINTER X2 Migatronik has launched a portable Tungsten grinder, that is both environmentally friendly and able to grind quality points on Tungsten electrodes for TIG and plasma welding.

The storage case along with the moderate weight make the GREENPOINTER X2 ideal for working on site.

GREENPOINTER X2 is the only machine equipped with an integrated dust filter, thereby protecting the operator and the environment against the unhealthy dust produce during grinding of the electrode. The filter is replaceable.

Due to the use of an electrode holder GREENPOINTER X2 is able to grind electrodes as short as 15mm with a standard electrode clamp. A special electrode clamp allows grinding of electrodes as short as 8mm. The use of the electrode holder also ensures a precise and centered tip.

GREENPOINTER X2 is equipped with an inspection cover enabling the operator to view the grinding operation. GREENPOINTER X2 is easy to operate, set the required grinding angle, secure the electrode into the holder using the locking devise. The electrode is now set so as to minimise the amount of grinding required (0.3mm removal). A unique feature of the GREENPOINTER X2 is an eccentric plate, which makes it possible to adjust the grinding position on the face of the wheel, this triples the life of the diamond wheel.

GREENPOINTER X2 is supplied in a case fully equipped for use, electrode clamps for 1.6, 2.4 and 3.2 mm Tungsten electrodes are included, other dimensions are available. GREENPOINTER X2 carries CE qualification and is manufactured to meet all EU directives.

Power supply: 230 V
Ppm:: 28000

Motor: 850 W
Weight: 2.8 kg

Item number: 82036170

Adjustable grinding angle from 15-180° (included angle).

Precise adjustment of the stick-out.

Eccentric plate triples the use of the diamond wheel.

Integrated exhaust with a replaceable dust filter.

Stand for fixing the GREENPOINTER X2 to a bench.
